University Recruiting Team
Amazon

Dear Hiring Manager,

I am writing to apply for the **Software Development Engineer (SDE) 6-months Internship (2027)** at Amazon. With my robust background in **scalable backend engineering, distributed systems**, and a strong foundation in computer science principles, I am excited about the opportunity to build innovative technologies that positively impact Amazon's global customer base. Amazon's commitment to **customer obsession** and building **high-scale, fault-tolerant systems** strongly aligns with my hands-on experience and career aspirations.

In my recent experience as a Software Developer at Sitramix, I have engineered and optimized **scalable, distributed back-end architectures**. I designed **RESTful APIs** and **asynchronous job processing pipelines** that improved system performance and reliability under concurrent workloads. For instance, I built a **Redis-backed distributed image-processing workflow** that generated **over 600 high-resolution assets in under two minutes**, directly **reducing manual processing time by 48%**. This experience in designing solutions for broadly defined problems mirrors the complex technical challenges Amazon SDEs tackle daily in areas like automation and scalability.

Additionally, I have leveraged modern cloud infrastructure, primarily **AWS (EC2, S3)**, to deploy and maintain production environments, and I am currently pursuing the **AWS Certified Cloud Practitioner** certification. My background in building **multi-tiered systems**, coupled with my proficiency in **Python, JavaScript, SQL, and algorithm optimization**, enables me to contribute effectively to your agile development teams. Working with AI integrations like **OpenAI and LangChain** for large-scale data processing has further honed my ability to handle **ambiguous, data-heavy problems** and deliver **low-latency, scalable solutions**.

I am highly motivated by Amazon's culture of ownership and its drive to solve the industry's toughest challenges at scale. I would welcome the opportunity to bring my technical expertise, passion for distributed systems, and collaborative mindset to your engineering team for this internship.

Thank you for considering my application. I look forward to the possibility of discussing how my skills and experiences can contribute to Amazon's continued success.

Sincerely,

Shiv Santosh Sarwade
